Assignment #1

EMI Calculator

Marvin Vuu 100658428

This program uses basic functionalities to receive user input and calculate EMI. In the first screen, the user is prompted to input three variables, the principle or loan amount, the interest rate and the mortgage tenure. Once all three inputs are filled in, a button that's linked to an eventhandler will retrieve the numbers in the three forms and calculate the EMI with the correct formula. Once the EMI is calculated, it's displayed on the screen.
